Title: A New Kind of Field Trip

What I know: I know what a field trip is and what it is like to be on a field trip. It's like being there in real life, but you're not really there. You can go to many different places.

Questions I have: I know you have to use a phone and I wonder where they are going to get a phone? How can a cardboard box have virtual reality?

| Important details | My thinking |
|---|--|
| Emily's class went to Rome and China on field trips without leaving their own classroom! | <ul style="list-style-type: none">• That's pretty cool!• That's impressive because it doesn't take as much time as it would if you actually flew to that place.• It's amazing that the technology is that good to do this. |
| It's a 3D trip that the teacher leads on a tablet. The students see through a cardboard viewfinder and a smart phone. | <ul style="list-style-type: none">• That's pretty cool because my mom has one and she wasn't suer how to work it but now I realize how it works. That's pretty cool that you can see something that's not right in front of you.• It's really cool that you can do this without moving.• It's really good because if people are in a wheelchair it's easier for them to see things all over the world. |
| They are spreading it throughout the US | That's so interesting! |

What I know now and new questions I have:

Now I know that you can see things even when you are not in that place.

Even if you were sick you would never miss out on a field trip.

Why was this designed? Specifically for schools or or for people in wheelchairs?

I think that it is good for the environment because it's cardboard.
